

Which Git hosts does Flow support?

Tags: [Flow](#)

Flow works with Git repositories and ticket vendors.

If your repositories are available in the cloud or behind a firewall, Flow can connect to your codebase. Learn more about [using Flow with an internal server or behind a firewall](#).

Flow integrates with the below Git hosts and ticket vendors:

If you host your code in any of the below Git hosts, Flow ingests your commit data, pull request data and tickets/issues.

Note: Ticket-based reports including Retrospective, Ticket log, Sprint movement, and Investment profile only include ticket data from Azure DevOps Services and Jira.

- [GitHub cloud](#)
- [GitHub Enterprise](#)
- [GitLab cloud](#)
- [GitLab Enterprise](#)
- [Bitbucket cloud](#)
- [Bitbucket Server](#)
- [Azure DevOps Services \(VSTS\)](#)
- [Azure DevOps Server \(TFS\)](#)
- [Jira](#)

Flow also works with the following vendors via HTTPS or SSH:

- [Assembla](#)
- [Beanstalk](#)
- [Kiln](#)
