Getting started

You need the Configurations permission to modify your general configurations.

To set manual configurations:

1. Click Settings in Flow's top navigation bar.
2. In the left navigation under Report settings, click Configurations.
Pull requests to exclude

Use this configuration to exclude PRs by regular expressions. Some organizations want certain PRs excluded from metrics. People with WIP PRs are a common example. Use a regex to conform the Flow platform to your process. Learn more about excluding pull requests.

Pull request tracking

Use this configuration to adjust when some of your PR metrics calculations begin, specifically time-based metrics, like Time to merge.

Track PRs from the time they were:

- Created - This is the default and recommended configuration. Flow tracks the moment they are created.
- First commented - Flow tracks PR metrics from the time the first comment was made.
**Important:** Changing this setting can cause slight delays in processing pull requests. If you use **First commented** for your Pull request tracking, your Time to first comment will always be zero.

---

**Pull request comments to exclude**

Use this configuration to exclude specific pull request comments using regular expressions. Some teams have processes where certain comments should be excluded from metrics, for example, "+1". Learn how to exclude pull request comments.

---

**Comment robustness**

Use this configuration to customize your comment robustness for comment-based metrics.

Set boundaries by adjusting the number of words that count for trivial, regular, and robust comments.

---

**Default pagination page size**

Use this configuration to determine how many rows of data Flow displays in reports that use pagination.

Reports that use pagination include:

- Work log
- Review collaboration
- Review workflow

---

**Custom date ranges**

This configuration enables your organization to take advantage of creating custom calendars and events.

Toggle configurations on for:
• Enable custom date ranges - This setting enables you to show specific calendars and/or sprints in your date picker in your reports. Learn more about custom date ranges.

• Utilize updated calculation logic to support custom date ranges (recommended) - This setting changes the way any partial week is calculated in your Team health insights report. Metrics are weighted on the number of days selected in the time frame rather than entire weeks.
