

Flow release: March 29, 2019

Tags: [Flow](#)

Highlights

- User 2.0 changes how users and contributors are managed.
- Nested Teams allows you to create parent and child team relationships.
- Add multiple Integrations from the same Git host under one user.

Features/major changes

- **User 2.0 changes how users and contributors are managed.**

This release presents a completely revamped take on our [User management](#) experience. It is more a clear, more responsive and much more seamless experience for managing Users. Additionally, the [merge tool](#) has been completely overhauled and improvements have been made to the merge suggestions. A new API allows you to merge users programmatically.
- **Nested teams allows you to create parent and child team relationships.**

Now you can replicate your organizational structure and to make the process faster, you can import teams from GitHub or from a .csv file.
- **Add multiple Integrations from the same Git host under one user.**

Individual Flow users now has ability to add & manage multiple Integrations from the same Git host.
