

## User alias API

Tags: **Flow**

A user alias object is created for each unique way a user shows up in a source system such as GitHub, and Jira. One person may do work under many different email addresses or user ids. The user alias object is a record of each of those identities. Many user aliases can be merged together to create one user id.

Who can use this?

Core

Plus

### Supported request

Get a collection of user aliases: [https://flow.pluralsight.com/v3/customer/core/user\\_aliases/](https://flow.pluralsight.com/v3/customer/core/user_aliases/)

### Fields
