

## Events API

Tags: **Flow**

An **Event** represents a labeled date of note that is defined by a user and appears in various reports to offer context. **Events** can be given tags, which allow them to be organized into logical groups.

Who can use this?

Core

Plus

## Supported request

Get a list of events:

```
https://flow.pluralsight.com/v3/customer/core/events/
```

## Fields

Name	Type	Description
id	double	Unique identifier for an event.
name	string	Name of an event.
date	string	Date and time of event.
tags	string	An array of tags associated with the event.

## Example response

```
1 {
2   "count": 37,
3   "next": null,
4   "previous": null,
5   "results": [
6     {
7       "id": "1234567890",
8       "name": "New Peeps",
9       "date": "2018-05-22T00:00:00",
10      "tags": [
11        "New Peeps"
12      ]
13    },
14    {
15      "id": "0987654321",
16      "name": "Holidays",
17      "date": "2017-01-26T23:00:00",
18      "tags": [
19        "Holidays"
20      ]
21    }
22  ]
23 }
```
