

Repos

A repository is a representation of a source control repository that has been discovered by our system using a set of user credentials. Once a repository is discovered, it is then tied to a pull request project.

Supported request

Get a list of repositories:

```
https://flow.pluralsight.com/v3/customer/core/repos/
```

Fields

Name	Type	Description
id	double	Unique identifier for a repository.
name	string	Name of a repository.
url	string	Repository URL.
added_by	string	Unique identifier of user who added the repository.
updated_at	string	Date and time a repo was updated.
vendor_type	string	Vendor type where the repository is installed.
audit_created_at	string	Date and time the repository audit was created.
added_by_id	double	Unique identifier of user who added the repository.
is_private	boolean	True indicates the repository is private.
blocked	boolean	True indicates the repository is blocked.
youngest_commit_date	string	Date and time of newest commit.
oldest_commit_date	string	Date and time of oldest commit.
last_fully_updated_at	string	Date and time repo was last updated.
last_fetch_failure_reason	string	Last fetch failure reason.
public_key	string	Public key for repository.
ignore_list	string	Excluded files, folders and directories.
staff_access_expires_at	string	Date and time staff access expires.
tags	string	An array of tags.
skip_hexshas	string	An array of hexshas to skip.
created_at	string	Date and time a repo was created.
integration_id	double	Unique identifier for an integration.
meta	string	Unused field.

commit_url	Name	Type	Description
progress_status		string	Repo updating progress status.
description		string	Repo description.
fetches_failing_since		string	Date and time repo stopped processing.
last_processing_success_at		string	Date and time of last successful processing.
last_failure_or_success_at		string	Date and time of last processing attempt.
web_url		string	Repo web URL.
clean_url		string	Clean repo URL.
sortable_state		string	Sortable repo state for filters. 0=blocked, 1=fetch_failues, 2=good
owner_name		string	Group/org owner of repo.
owner_vendor_id		double	Vendor ID.
