

Flow release: October 29, 2020

Tags: [Flow](#)

Features and major changes

- The [Code Fundamentals report](#) has been updated. It was designed from the ground up to be substantially faster than the existing experience. There are two main metrics changes:
 - Empty weeks are now excluded from individual metrics, which should lead to a general increase in Coding Days per week and Impact for an individual in Code Fundamentals.
 - Averages are now weighted, instead of using an "average of averages" methodology. This makes the math more straightforward. Learn more about Code Fundamentals metrics [here](#).
- Four new options have been added to the Integrations page: Update all repos, Update all PRs, Update all tickets, and Update background metrics. These commands help troubleshoot issues with project processing by triggering a full reprocessing of repos, PRs, tickets, or metric calculations, so we recommend consulting with a member of Support before use as it could back up queues or result in rate limiting. Learn more [here](#).

Resolved issues

- Excluded user PRs appearing as if there was a PR exclusion rule set up
- Duplicate roles being created
- Not able to edit view rights at the role level when advanced view rights are enabled
- Excessive merge user tool load times
- Issue loading Player card reports
- Unable to add a message when creating a Slack rule
