

Flow Enterprise Server

Welcome to Pluralsight Flow. This suite of articles answer questions related to installing, maintaining, and administrating your version of Flow Enterprise Server.

The latest version of Flow Enterprise Server is 2022.3.1. This is Flow's final major Flow Enterprise Server release. Learn more about [the future of Flow in the cloud](https://help.pluralsight.com/help/future-of-flow-enterprise-server) (<https://help.pluralsight.com/help/future-of-flow-enterprise-server>).

Flow Enterprise Server includes the functionality of the Flow Cloud offering and can be installed inside your data center or private cloud.

Flow Enterprise Server:

- Lets you install Flow into your data center or private cloud to protect it behind a firewall
- Never sends information about your source code or metrics outside your infrastructure
- Is completely self-contained
- Lets you integrate with GitHub, GitHub Enterprise, BitBucket, BitBucket Server, and GitLab Cloud

Get set up for success

Important: First, carefully read the [system requirements article for 2022.3.1](https://help.pluralsight.com/help/flow-enterprise-server-2022-3-1-system-requirements) (<https://help.pluralsight.com/help/flow-enterprise-server-2022-3-1-system-requirements>) before installing or updating Flow Enterprise Server.

Release notes

What you'll find:

- Information on what's new in Flow Enterprise Server for each new release
