

Flow release: December 3, 2020

Tags: [Flow](#)

Features and major changes

- Now you can view your historical team imports from the Team import history page. Access this from the Teams page by selecting **Import teams**. On this page, see the last 90 days of team imports, download the results of CSV team imports, and view results stats. Learn more about [bulk importing teams](#).
- Email reports delivery frequency can now be set to any interval. This is helpful for teams who want their email report cadence to match their sprint cycles.

Resolved issues

- **Show forks** toggle always showing enabled on the Available tab of the Repos page.
- Miscellaneous issues with pull request reports
- Unable to set targets for teams nested under more than one level

Miscellaneous updates

- Admin alerts now include both blocked repos and repos in a failure state
- Performance improvements to the User Merge API endpoint.

If you need help, please email support@pluralsight.com for 24/7 assistance.
