

## Filtering analytics with nested teams

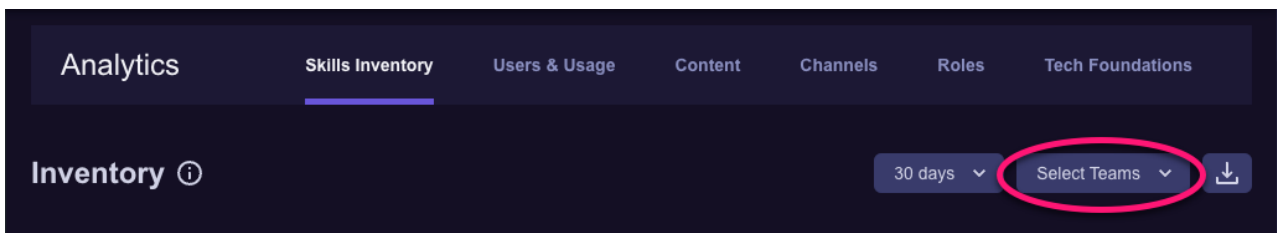

Tags: **Skills**

If you've set up [nested teams](#), you have more control over what you see in analytics by filtering your nested team structure. This allows you to focus on the analytics you really want to see.

**Note:** Nested teams filtering is available in Content, Skills inventory, Subjects, and Users & Usage analytics. It is not available for Channels or Roles analytics.

	Who can use this?				
	<u>Stnd</u>	<u>Prem</u>	<u>Strt</u>	<u>Pro</u>	<u>Ent</u>
<u>Learners:</u>					
<u>Managers:</u>			✓	✓	✓
<u>Admins:</u>			✓	✓	✓

1. On your analytics page, click the **Select teams** filter.

2. Scroll through the team hierarchy to find the teams you want to include.
3. Select a single team or multiple teams.
4. Click the caret of any parent teams to show or hide their child teams.

**Tip:** All teams with a caret beside the team name are parent teams.

Search bar: [ ]

- Cloud migration
  - Experience
- Leader
  - Lambda Nation
  - Palantir
- Learner**
  - A-team**
  - Dopamine**
  - Prime Directive**
  - Snugbear**
- Data
- Security

Buttons: Clear selections, Apply 5 teams

5. Checking the box of a parent team will automatically select all child teams, if applicable. But you can individually deselect any child teams you choose.

**Tip:** With large team structures, the team you're looking for may be buried under multiple nested teams. If you can't see the team you're looking for in the hierarchy, you can type part of its name in the search bar. Once you find it, you can select or deselect it, and expand its child teams, if applicable.

To return to the full team hierarchy, clear what you've typed in the search bar. Any teams you selected will remain selected.

6. Once you're satisfied with your team selection, click **Apply teams** to view their analytics. Or if you'd like to start over, click **Clear selections**.
