

Flow release: March 25, 2022

Tags: [Flow](#)

Features and major changes

- Now you can access the [Sprint movement](#) report. This report helps improve your teams' efficiency by tracking how much work your teams are completing and adding during sprints. This allows you to track how well your teams are accomplishing the goals they've set.
- Now you can see more information about the health of your integrations. On the Integrations page, there's an additional Data status column to let you know of any [issues in data processing](#). Some data processing issues, like rate limited integrations, will resolve on their own. Others require you to take action to resolve the issue. Use the Data status column to make sure your Flow data keeps processing correctly.

If you need help, please email support@pluralsight.com for 24/7 assistance.
