

Flow release: May 5, 2023

Tags: [Flow](#)

Features and major changes

- We've updated the date filter in all reports to ensure consistent date-selection behavior within reports and when moving between reports. This update includes standardizing how all of the preset date ranges select dates in reports. This will make it easier for you to move seamlessly between multiple Flow reports in a single visit.

Resolved issues

- Some repos showing in both the **Imported** and **Available** tabs.
- Daily digest email incorrectly applying view rights.
- Unable to filter tickets in Ticket log for large numbers of tickets.
- Unable to use the updated_date parameter when querying the available_repos and available_ticket_projects API endpoints.
